DEFORESTATION

People destroy forest for wood, land, ...
 But it's big problem for all of us.

WHY DO WE NEED THE FOREST?

The world's forests - especially the rainforests of South America, Africa or South-East Asia are vital to the earth's climate.

They take in carbon dioxide from the atmosphere, so they help to control global temperatures.

Most of the world's rain is produced by the forests, too.

WHAT CAN WE DO TO SAVE THE FORESTS?

We can't cut down trees.

We have to recycle more.

We must economize paper.

We must control greenhouse gases because they make an acid rain.

IF WE WANT TO SAVE THE PLANET, WE MUST SAVE THE FORESTS.

ENVIRONMENTAL PROBLEMS

1. MELTING ICE CAPS

The melting of the ice caps increase the volume of water in the oceans and it also decreases the salinity. Since ice caps are made of fresh water, adding more fresh water without adding a salt makes the ocean water less dense.

WHAT TO DO?

We must stop burning fossil fuels, because it makes ozone holes, so the ice is melting.

2. DEFORESTATION

- This is the main reason of global warming
 - Every year over 200,000 km² of the world forests are destroyed
 - However in another cases the land is burnt by people
 - as a result billions of tons of greenhouse gases are released to the atmosphere
- WHAT TO DO?
- We must stop deforestation and burning trees.

3. FOSSIL FUELS

- because power stations burn fossil fuels, they are releasing in to the atmosphere
- also, the fossil fuels are burnt by airplanes, cars, power stations...
- these fuels are bad for our health

WHAT TO DO?

We must stop burning fossil fuels.

POLLUTION

Water

- In the sea are real islands of floating plastic.
- There are plastic everywhere - even in the water we drink
- Plastic kill animals and fishes
- Every year 8 to 11 mil. tons of plastic get dumped into the ocean

Forest

- lungs of earth
- is really sad, that deforestation is fault of people
- is really drought and forest don't have enough water, because of that its a lot of fires.

AIR

- In atmosphere is carbon dioxide, smoke in big city
- fossil fuels, from cars, buses, trains, greenhouse gas.
- in whole world is very dangerous GLOBAL WARMING.
- it mean that winters are to cold and summers to enough hot.

HOW CAN WE HELP?

- We can buy a bamboo toothbrush.
- We can bring our own shopping bags
- We can wear clothes made from organic materials.
- Ocean sells tickets, and with money they pay divers and fishermen to clean the ocean

Pollution of water !

Today is the world water day (22.3.).

Water is very important for our whole life.

Pollution of water: coal, plastic material, trash...

A lot of animals are dying, for example: whale, dolphin, fish and more.

When the ice cap are melting a lot of islands are under water.

Water can make cunami.

Cunami destroy a lot of buildings.

When every animal and other will die, the whole water will be dead.

Before some days there was found a whale with 40kg of plastic in her stomach.

Water resources

Zemplínska šírava-lake

It is the second largest dam in Slovakia in below Štôckaláka vrbky. Sometimes called the "lovak sea"

Starina-dam

- is the largest drinking water reservoir in Slovakia and is also the largest source of drinking water in central Europe.

Domaša-lake

- is a multi-purpose waterworks reservoir in the districts of Váner and Topor and Štephor. It is 14 km long and 4 km wide.

MORSKÉ OKO-LAKE

- is the third largest natural lake in Slovakia after Štôcká pleso and Vélké Hancovo pleso in the High
